Horizon® Imager Software

Version 1.7.3 Release Notes

Horizon version 1.7.3 software corrects two defects:

◆ "Edge blanking" has been disabled for 8x10 **DirectVista**® Film because of a rare problem where the outer edges of image data had the potential of being cropped. As a result, automatic centering has been disabled for 8x10 film. Image quality and printable area are unaffected. No other film sizes or media types are affected.

◆ An LPR protocol defect has been repaired allowing better compatibility with third-party framegrabber products.

In all other respects, version 1.7.3 is identical to version 1.7.2. See Version 1.7.2 Horizon Imager Software Release Notes (Codonics Part Number 901-084-003) for full details.

This software is compatible with all Horizon imagers. Any Horizon imager running software versions 1.4.x through 1.7.x can be upgraded to version 1.7.3.
