

Codonics Horizon Operating Software

Technical Brief

Version 2.2.0 Release Notes

Summary

Horizon[®] 2.2.0 software reduces the likelihood of SmartCard corruption and provides factory support for media keys 32 to 255.

Products Affected

Imagers with a serial number prefix 50C, 51C, or 52C are affected. Please contact your Codonics representative for further information.

The Imager Software Version can be determined using the Control Panel by viewing the Imager Info screen from the Utilities menu.

NOTE: Horizon Imagers with serial number prefix 50C, 51C, or 52C upgraded to Version 2.1.0 or higher software cannot be downgraded to any previous version.

New Features (Adaptive Updates)

- ◆ None in this release.

Product Improvements (Perfective Updates)

- ◆ **Improved SmartCard Reliability.** Horizon reads the SmartCard at system startup and writes it back to the card at various times. The time needed to write to the card has been reduced. This will reduce the window for removing a SmartCard during a write operation, thus reducing the likelihood of SmartCard corruption.

- ◆ Horizon 2.2.0 software provides factory support for media keys 32 to 255.
- ◆ The FDA UDI GTIN (14-digit number) has been removed from Horizon software. Since Horizon software only works on Horizon imagers, a UDI number is not required for software.

Defects Corrected (Corrective Updates)

- ◆ None in this release.

Known Common Issues

- ◆ Previous issues can be found in previous Release Notes.

Known Uncommon Issues

- ◆ Previous issues can be found in previous Release Notes.

Technical Support

If problems occur during software installation, please contact Codonics Technical Support at any time.
